

Since air is a fluid
Can be dry or humid
Moving to low pressure from high
Local winds are short ones
Uneven heating
Anemometer measures high

The breeze that the wind gives
Right around sunset
A land breeze at my back
But in the morning
Wind comes toward me
A sea breeze moving inland
Oh, but with seasons
Monsoons, oh, in Asian land

Do you know if it's a cold front? oh
Moving quickly changing weather, eh
Or maybe it's a warm front? oh
Slowly moving bringing water, eh

Warm air meets cold, a standoff
Stationary fronts-rain
Occluded-warm air's cut off, oh
Cool air squashes and cools it, eh

You know air can move like pockets
Global winds rock
Convection currents equator to the poles
The Earth is always spinning
Effect Coriolis-curving wind changing the flow

Many years sailors trade winds helped them
Move west to sell their prize
Equator-there are doldrums
Wind is very ho hum
30 South and 30 North
Oh, no back and forth
Horse latitudes throw them overboard

Do you know if it's a cold front? oh
Moving quickly changing weather, eh

Or maybe it's a warm front? oh
Slowly moving bringing water, eh

Warm air meets cold, a standoff
Stationary fronts-rain
Occluded-warm air's cut off, oh
Cool air squashes and cools it, eh

Prevailing Westerlies, blow the air
From west to east they, come again
Polar easterlies, from the east
Away from poles, it blows away from poles

And the bands of high winds, called jet streams
Wander north and south, on a path
Mostly moving, west to east
Aiding planes, on cruise control

Do you know if it's a cold front? oh
Moving quickly changing weather, eh
Or maybe it's a warm front? oh
Slowly moving bringing water, eh

Warm air meets cold, a standoff
Stationary fronts-rain
Occluded-warm air's cut off, oh
Cool air squashes and cools it, eh

Is it a cold front? oh
Or maybe it's a warm one? eh
Complex occluded front, oh
Could it be a stationary one? eh
It might be a cyclone, oh
Or an anticyclone
I said oh, no, no, no, no
